**NFP/Equias Alliance - Michael White Report  
BOLI Assets Grew 2.1% to \$172.9 Billion as of March 31, 2019**

**FOR IMMEDIATE RELEASE** – *Memphis, TN, and Radnor, PA, June 30, 2019* – The Cash Surrender Value (CSV) of bank-owned life insurance (BOLI) policies held by commercial banks, savings banks and savings associations grew 2.1% to \$172.9 billion as of March 31, 2019, up from \$169.4 billion as of March 31, 2018, according to the *NFP/Equias Alliance-Michael White Bank-Owned Life Insurance (BOLI) Holdings Report™*.

BOLI is used to offset and recover a portion of the costs of employee benefits, thereby helping banks keep up with ever-rising benefit costs. BOLI may be differentiated by **three product types: general account (GA); variable separate account (VSA); and hybrid separate account (HSA).**

The *NFP/Equias Alliance-Michael White BOLI Holdings Report™* is co-produced by NFP/Equias Alliance and Michael White Associates (MWA). The information in this report was gathered from data submitted to regulators by all 5,362 banks operating on March 31, 2019. Among the study’s most significant findings are these:

By Asset Size:

- Of the 5,362 banks and savings associations, 3,439 or 64.1% reported holding BOLI assets as of March 31, 2019, and total BOLI CSV climbed by \$3.50 billion (2.1%) from \$169.42 billion as of March 31, 2018 to \$172.92 billion as of March 31, 2019. (See Tables 1 and 2.)

- Net growth in BOLI holdings can be attributed to new purchases and earnings on existing CSV, reduced by death claims collected and policy surrenders (if any).
- For banks with over \$100 million in assets, the percentage owning BOLI stood at 70.9% as of March 31, 2019, and for banks with over \$300 million in assets, the percentage owning BOLI stood at 77.5% as of March 31, 2019.

- Although the number of banks holding BOLI declined between March 31, 2018 and March 31, 2019, this decline was, once again, primarily attributable to the continuing trend in the banking industry of mergers and acquisitions rather than banks terminating their BOLI programs.

- Although five of the asset classes showed a decline in the amount of BOLI assets they held, this was not due to the surrender of BOLI policies or a drop in the CSV of the policies, but rather a result of several of the banks that were at the top of their respective asset class category moving into the next higher bracket between March 31, 2018 and March 31, 2019. Thus, banks at the higher end of the asset class categories were replaced by new banks coming into that asset class with smaller amounts of CSV resulting in an overall drop in BOLI assets for that asset class.
- Institutions with assets over \$10 billion attained the only percentage increase (3.4%) in BOLI assets. (See Table 2.)

By Type of BOLI Asset:

- The BOLI assets most widely held by banks as of March 31, 2019 were GA policies. (See Table 4.) Ninety-seven percent (96.9%) or 3,334 of the 3,439 of the banks reporting BOLI held \$80.75 billion in general account life insurance assets, representing 46.7% of total BOLI assets as of March 31, 2019. (See Tables 3 and 4.) In GA policies, the general assets of the insurance company issuing the policies support their CSV.
- In recent years, banks have gravitated back to general account products because GA products provide more carrier options, somewhat higher yields and simplicity when compared to other BOLI products.

- With a balance of \$73.79 billion, VSA BOLI represented 42.7% of all BOLI assets as of March 31, 2019, down from 43.4% as of March 31, 2018. (See Table 3.) Variable separate account CSVs are supported by assets legally segregated from the general assets of the insurance carrier. The policyholders neither own the underlying separate account created by the insurance carrier on its behalf, nor control investment decisions in the underlying account, but they do assume all investment and price risk. Accordingly, the investment income and investment gains and losses generally accrue directly to the policyholders and are not accounted for in the general account of the insurer, nor are values guaranteed by the general account of the insurer. Most banks that purchase a VSA product use a “stable value wrap” arrangement provided by a carrier or a third party to reduce the income statement volatility. Because of its complexity, VSA is held by only 12.3% of the banks reporting BOLI assets.
- Thirty-five percent (34.8%) of banks reporting BOLI held hybrid separate account assets as of March 31, 2019. The \$18.37 billion in HSA assets represented 10.6% of total BOLI assets, making HSA the

smallest reporting category of BOLI assets when measured by CSV. (See Tables 3 and 4.) Hybrid separate account insurance policies combine features of both general and separate account insurance products. Like general account life insurance policies, the general assets of the insurance company issuing hybrid separate account policies support the policies' cash surrender values. However, like variable separate account policies, the assets of hybrid separate accounts are protected from claims on the insurer.

By Institutional Charter:

- There was an increase in the dollar amount of BOLI assets held among all charter classes, except savings associations and savings banks. All charter classes except savings associations and savings banks experienced increases in the percentage of banks reporting BOLI assets. (See Tables 5 and 6.) The decline in BOLI assets held by savings associations and savings banks was due to the fact that some of them were acquired, and others converted their charters to national banks or state banks. Savings banks and state-chartered Fed member banks had the highest percentage of banks with BOLI assets.

- Once again, we see that the overall number of banks in each charter class has declined and that the decline is primarily due to mergers or charter changes.
